Brick barn peg mantel mount

We recommend 4 bolts and pegs more towards the outside ends leaving a bigger blank area in the middle for most mantels. Add some construction adhesive or epoxy in the anchors and on the back of the mantel after a dry run if you have a heavy piece. You can install the lead anchor in solid brick or a mortar joint. Just be sure it is secure. Some bricks are hollow. You may choose to go with smaller bolts and anchors depending on the weight or shape of you mantel piece. Use your best judgment. We except no responsibility for damages or injury.
